

PORTFOLIO

AIDAN ISMAIL

ABOUT ME

Hello, my name is Aidan Ismail,
I love Building and Designing digital solutions!

Experience

- April 2026 - Present **TEDxPadjajaranUniversity 2026**
Front-End Developer
- Feb 2026 - Present **DBS Foundation Coding Camp**
AI Engineer Cohort
- Aug 2026 - Dec 2025 **PIPP Unpad**
Product Lead/ Unity Engineer
- Mar 2025 - Jul 2025 **TEDxPadjajaranUniversity 2025**
UI/UX Designer
- Jan 2025 - Dec 2025 **Himatif FMIPA Unpad**
Head of IT Development

Interests

- Software Engineering
- Applied AI
- Product Management and Design
- Data Stuffs
- Tech Consulting

Education

- 2023 - Present
Universitas Padjadjaran
Computer Science

PROJECTS

Building is not just a phase; it is a continuous pursuit.
Explore a curated timeline of my works, where I combine technical execution and ideas to build meaningful solutions.

SUARAUNPAD

Role: Front-End Developer & Product Designer

Year: 2026

About

Originating as a Software Engineering course final project, **SUARAUNPAD** addresses the need for transparent campus decision-making by centralizing scattered student voices. I designed the core product workflows and engineered the platform using React and Next.js. The result is a robust digital advocacy space that empowers Universitas Padjadjaran students to seamlessly submit reports, raise aspirations, and participate in policy-related voting.

TEDxPU 2026

Role: Front-End Developer

Year: 2026

About

Built to streamline participant registration, the **TEDx** platform demanded a dynamic yet accessible interface. I engineered the frontend and integrated GSAP for interactive animations. Translating complex designs into production-ready pages, the result is a UX-friendly experience that intuitively guides users while maintaining strict TEDx branding.

ZICHARA

Role: Unity Developer & Product Designer

Year: 2026

About

Originating as a Human-Computer Interaction course project, **ZICHARA** solves the traditional pain points beginners face when learning Hanzi. I defined the core user journey and built this AR educational tool to replace static barriers with interactive spatial learning flows. The application significantly increases engagement in Mandarin character and Pinyin recognition through immersive visual guidance.

YOURI AI-SERVICE

Role: AI Engineer & Product Designer

Year: 2026

About

Built as the AI backend layer for Youri Smart Cooking Assistant, Youri AI-Service helps users make better cooking decisions from the ingredients they already have. I engineered a FastAPI microservice that matches user ingredients to relevant recipes using TF-IDF, ingredient normalization, and scoring guards to avoid unreliable recommendations. I also developed a hybrid ingredient substitution engine that combines functional food-group compatibility, cosine similarity across flavor profiles, and a TensorFlow deep learning ranker with a custom FlavorInteractionLayer. The service supports protected internal API access, asynchronous substitution processing, polling-based AI results, and model evaluation metrics reaching 88.75% accuracy with 0.018 MAE in internal validation.

NIHONGO-RAG

Role: Full-Stack Developer

Year: 2026

About

Built as a Semantic Web-based Japanese vocabulary search system, **NIHONGO GRAPHRAG** connects RDF/Turtle Knowledge Graph data with Apache Jena Fuseki, SPARQL, and LLM integration. I developed a Next.js interface where users can ask natural language questions and receive structured Japanese vocabulary results, including kanji, hiragana, romaji, and meaning. The system translates user intent into SPARQL queries, retrieves matching data from the Knowledge Graph, and synthesizes the result into a clear natural language response.

LOGISTICS DATA WAREHOUSE

Role: Data Engineer

Year: 2026

About

Developed as a Data Warehouse final project, Logistics Company Data Warehouse simulates logistics delivery performance through a complete data workflow, from raw shipment data generation and ETL processing to PostgreSQL star schema modeling and managerial analytics. I built the pipeline to clean dirty data, load fact and dimension tables, record ETL audit logs, and support insights on SLA performance, branch ranking, route bottlenecks, customer segments, revenue, item categories, and delay root causes through an interactive Streamlit dashboard.

TITRA SIMS

Role: Unity Developer & Product Designer

Year: 2025

About

To solve the safety risks and costly chemical dependencies of traditional pharmaceutical labs, I led the development of **TITRA SIMS** at PIPP Unpad. Engineered with Unity and Vuforia, this Android-based AR simulation digitizes complex titration procedures into interactive modules. The delivered MVP successfully provides a safer virtual learning environment for 150+ pharmacy students per semester.

TEDxPU 2025

Role: UI/UX Designer

Year: 2025

About

To elevate the event's digital brand maturity, the **TEDx** identity required a highly structured redesign. I architected 10+ responsive interfaces using rigorous Swiss Design grid principles. Ensuring 100% design-to-code accuracy, this cohesive aesthetic successfully drove over 20,000 user interactions.

SUSTAINABITE

Role: UI/UX Designer and Researcher

Year: 2025

About

MSME food distribution faces critical sustainability challenges. Submitted for GEMASTIK 2025, **SUSTAINABITE** tackles this by connecting MSMEs directly with end-consumers. I applied Design Thinking to craft high-fidelity prototypes aligned with SDG goals. Through iterative research, the validated platform achieved an impressive 8.8/10 usability score.

PILKETOS 2023

Role: Front-End Developer

Year: 2023

About

Manual student elections face slow tabulation and invalid voting risks. I engineered a secure web-based e-voting system featuring real-time counting and validation. Serving over 900 active students, the platform successfully eliminated invalid votes and reduced tabulation time by 80%
